

ADAPTABLE LARGE AREA DISPLAY

Abstract of the Disclosure

A plurality of display image producing tiles may be abutted into a matrix and mounted on a structural supporting plate to produce a tiled display module. The tile display modules may be shipped and connected together on site to produce an overall display. Each of the tiled modules may be connected together to a back plate to produce the overall display. The tiles connected to a structural plate and the modules connected to a structural plate may be adjustably positionable with respect to one another in two or more dimensions.
